Course Description: In this 3-hour course, we will dive into the considerations of crafting practical Agile requirements, focusing on the principles and practices that drive Agile project management. The course will provide insights into the iterative and incremental approach, the significance of user stories, acceptance criteria, prioritization, and the continuous validation and verification of requirements. Additionally, we will discuss the impact of Agile principles on gathering and refining requirements, emphasizing collaboration, user-centric focus, continuous feedback loops, and adaptability.

Method of teaching: Students will learn tips, techniques and processes through webinars, which can be accessed 24/7 and completed at their own pace. Remember, though, that you must complete the course within 60 days.

Course Objectives:

Objective 1: Understand the challenges of gathering and refining requirements in Agile and Scrum environments compared to traditional methods.

Objective 2: Learn the significance of user stories, acceptance criteria, and their role in guiding the development process effectively.

Objective 3: Explore the roles and responsibilities of key stakeholders in crafting effective requirements.

Objective 4: Gain insights into the iterative and incremental approach and its impact on managing project requirements.

Objective 5: Understand the influence of Agile principles on when and how requirements are gathered, emphasizing collaboration, user-centric focus, continuous feedback loops, and adaptability.

Objective 6: Explore tools and techniques, such as prototyping, automated testing, and continuous learning, to refine and validate requirements effectively.
